 Lalitpur, Nepal

PROFILE

Experienced in building full-stack web applications using Django REST Framework and React, with hands-on integration of real payment gateways (eSewa & Khalti). Passionate about clean architecture, eco-conscious tech, and delivering production-ready software.

EDUCATION

BSc (Hons) Computer Science

Oct 2024 – Oct 2026

Herald College Kathmandu · University of Wolverhampton

TECH STACKS

- Languages: **C/C++, Python, JavaScript**
- UI Web Technologies: **HTML, HTML5, CSS, JWT Authentication, JSON, Axios, Tailwind**
- Web Frameworks: **React.js, Django**
- Databases: **SQLite, MySQL, MongoDB**
- Tools: **Git, Postman, VS Code, Figma, Unity**

FINAL YEAR PROJECT

Ecomarket – Eco-Friendly E-Commerce Platform for Nepal

2025 – 2026

Final Year Project · Django REST + React + Vite · 2025–2026

- Developed a complete e-commerce web application using **Django REST Framework** and **React + Vite**, focused on verified eco-conscious sellers and buyers in Nepal.
- Implemented JWT authentication, OTP email verification, multi-step seller onboarding, and admin approval system for sellers and products.
- Integrated eSewa and Khalti payment gateways, Green Points reward system, order tracking, and order-scoped chat functionality.

Techs Stack used: React, Django, JWT, Axios, Gmail SMTP, HTTP Polling, Aoath, Postman, Rest API ,esewa API, Khalti API, GIT Django ORM, SQLite

WEB DEVELOPMENT PROJECTS

Weather Now – Real-Time Weather App

2024

- Developed a responsive real-time weather web application that fetches and displays current weather data based on user search input.
- Designed and styled a clean, mobile-friendly user interface using **HTML, CSS, and JavaScript**.
- Integrated a third-party weather API using **JavaScript** to dynamically show key metrics such as temperature, humidity, wind speed, and pressure.
- Built backend logic with **PHP** to handle API requests and implemented **MySQL** database to store user search history and feedback.

Tech Stack used: HTML, JavaScript, CSS, PHP, GIT, OpenWeather API, XAMPP, JSON

Bikeeeez – Bike Rental Web Application

2025

- Collaborated in developing a bike rental platform, primarily responsible for frontend development using **HTML, CSS, and JavaScript**.
- Designed a clean, responsive user interface and intuitive user flow focused on simplicity and mobile usability.
- Assisted in backend integration using **Django Templates** and contributed to database management with **Django ORM** for bookings and bike availability.

Tech Stack used: HTML5, CSS3, JavaScript, Django Templates, Django ORM, Responsive Web Design principles.

OTHER PROJECTS

Delivery Simulation

2025

Unity AI & Pathfinding System

- Developed a real-time multi-agent delivery simulation in Unity using A* pathfinding for autonomous vehicle navigation.
- Designed a live UI dashboard displaying speed, distance, passenger count, and delivery status for each agent.
- Integrated a raycast-based collision avoidance system for head-on and overtaking traffic with full sideways movement.
- Built compound speed boost logic (+10% per passenger) and performance tracking using C# coroutines.

Tech Stack used: Unity Engine (C#), A* Pathfinding (custom implementation), Unity UI Canvas (runtime UI), Raycast-based collision detection system.

LangLearn

2025

Language Learning App (UI/UX Design)

- Designed an interactive language learning app prototype in **Figma** supporting English, Spanish, Hindi, and French.
- Created modern, user-friendly UI screens with smooth navigation, micro-interactions, and visual storytelling to enhance learning engagement.
- Ensured responsive and accessible design for both iOS and Android platforms.

Tech Stack used: Figma, Auto Layout, Components, Variants, Interactive Prototyping.
